Value Based Education - Need, Core Elements and Inculcation

Rohit Singh[a†¶], A. Charan Kumari[a§]

[a] *Dayalbagh Educational Institute, Dayalbagh, Agra – 282005, India*

Value based education is the need of the hour today, as the students are more inclined towards negative influences for fulfilling their goals. It is crucial that students realize that there is life beyond the materialistic lifestyle; values and ethics can help them lead successful lives and achieve the positions they wish in society. The primary goal of this study is to instill values in students. A well-balanced and polite society can be achieved by offering simple but effective ways at the state level. Given that subdividing a larger problem makes it simpler to solve it, values have been separated into several elements. Taking small steps or organizing challenges into categories will increase the chances of success. Students today require more focus because technology has a negative impact on their lives. It is necessary to shift technology's detrimental influence in a constructive direction. However, institutes are still striving hard enough to cultivate values and other elements in students. This study identifies five essential core elements and the activities that will help to inculcate these elements into the lives of students.

***Index Terms*-- Value, Value Education, Sanskriti, Sewa, Naitik Moolya, Vishleshan, Shistaachaar.**

I. INTRODUCTION

Swami Vivekananda always emphasized on character building with value-based education. He said "The character of a man is sum total of the bent of his mind. We are what our thought made us".

Mahatma Gandhi expressed his view on education as "Real education focuses on cultivating good character rather than filling the brain with data, facts, and statistics or on passing exams by reading a set number of books".

The world is changing swiftly as time passes, and people's perceptions, ideas, and mentalities are evolving right along with it. While technology has greatly advanced humankind's comfort, knowledge, and prosperity, it has also stolen many things from us, including social connections, morals, values, and culture, among other things. In order to better understand the issues society is facing in the absence of value-based education, this study is being attempted to formulate such issues.

While considering the current state of the world, and particularly of India, violence has been reported in several regions of the nation. If we dig a little deeper, it is not difficult to determine the motives of the individuals who were accountable for this violence, and it is also very simple to comprehend that these individuals did not receive an excellent education, or it can be said they did not receive value-based education. It is crucial to comprehend the reasons why a society can be established on moral principles and productive behavior through value-based education.

In order to thrive in the modern world, education is crucial. We might define education as an institutional structure that aids in a person's identity, development and life preparation by disseminating the knowledge, skills, and values required for them. It's encouraging to observe that people are becoming more educated and occupying higher social positions nowadays, but are they really?

To answer this question, we can classify the humans into three categories:

a. Illiterate individuals: who eventually lack the ability to read and write.

b. Literate: Although they have a degree and can read and write, these individuals are not useful to society, as they merely use their skills and knowledge to earn money

without showing social responsibility and respect. Even sometimes they will indulge in wrong practices to earn more money with an intention to make their lives luxurious.

c. Educated people: These people apply their knowledge and talents to improve society. They also use their problem-solving skills to address local, social, and political issues while at work. The building blocks of tomorrow are organized by these educators.

Inculcating values in students in an effective way will benefit tomorrow's society. The rest of this section will discuss some of the points that are to be reiterated as a pave for the future generations.

Sanskriti in India which belongs to the older generations of the community should be passed to the next generation, because it is the mirror which shows what our society was and what it is today. It will encourage the youngers to apply all those teachings which were taught in our rich culture, to recreate the value rich tomorrow.

A strong and kind character is what pupil want in their leader, with the ability of understanding the wrong and right it is easy to take big and right decisions and a right decision will always lead them to success.

The willingness to solve existing problems of locality, community and nation should become an inbuilt character in every individual. This requires a strong determination, higher level thinking skills, different approach of solving any problem and pointing a new perspective in existing solutions.

An individual who has good manners respects the emotions and wishes of those who reside nearby. He/she never treats others differently and treats everyone equally. A well-behaved individual must possess the qualities of modesty, humility, kindness, and courtesy. It is rightly said that manners are what makes a man and a woman perfect.

One of the crucial factors is respecting elders and to capture their rich experiences and knowledge. It is necessary to interact with them for a bigger field of view, additional experience and way more knowledge of what should not be done or what might be wrong for the humanity.

The main objective of this study is to provide realistic and broad base understanding of human values and educate students to become responsible citizen in their personal and social life. The following points are vital in achieving the objective.

- To cultivate and advance ideals like SANSKRITI, SWEA, NAITIK MOOLYA, VISHLESHAN and SHISHTAACHAAR in the students through several activities.
- To foster an interest in science, a scientific mindset and the ability to think independently and creatively.
- To provide science education that promotes the growth of one's physical, intellectual, moral, social and economic selves. For connecting cultural remedies with a scientific perspective.
- To guard against the development of a single species mentality. And to stop territorial division thinking, and religious division.
- To acquire the capacity to discern between good and bad, right and wrong.
- To develop respect for the dignity of the individual and society. So that they can also find themselves a part of the community and contribute their views.

The rest of the paper is organized as follows. Section 2 presents the related work. In section 3, the five core elements that are essential to inculcate values in students are presented. Section 4 describes the activities that are to be practiced for imbibing these core elements and section 5 concludes.

II. RELATED WORK

Kujur (2007) [1]

Investigated how value clarifying techniques affected class eight students' ability to resolve value disputes. The goal of the study was:

1. to determine any value dispute that the sample of individuals experienced.
2. for the determination of the subject sample handling value dispute.
3. to determine the subjects' phases of moral growth according to Kohlberg's stages of moral development.
4. to put into practice ways for value clarification that will assist the sample of subjects in resolving value conflicts.
5. to research the additional advantages of learning value clarification techniques using the test subjects.

Thakkar (2005) [2]

Thakkar Carried out a case study on the 'study of the moral principles included in the English textbook and reflection from standard XI teachers and students.' The study's goal was:

1. to find what values are reflected in the content of the book students' study in class.
2. to research what the pupils think about these ideals.
3. to research the English teacher's opinions on the same values.

Singh (2004) [3]

This study is to record the values, attitudes of teachers in schools and colleges on their profession. With objectives as follows:

1. to understand whether teachers can correlate values and attitudes with their profession.
2. to record whether teacher put their effort in rural and urban areas to encourage values in students.
3. to contrast college instructors' attitudes toward the teaching profession with those of school teachers.
4. to determine whether there is gender prejudice in attitudes about the teaching profession.

5. to determine if a teacher's locality influences their attitude toward the teaching profession.

Peter (2003) [4]

This research was done to learn more about democratic, secular, and patriotic perspectives on the current and future of higher education. Results of the study are presented below:
1. pupils' perceptions of national ideals were very strong, especially among upper secondary students.
2. to ascertain the students' stance on future issues of national importance, a moderate opinion was observed among the higher students.

Joshi, J. (1998) [5]

The goal of the study, "Development of democratic values through value analysis technique in civics at secondary stage," was to determine the efficacy of value analysis technique in terms of fostering democratic values among students through the teaching of civics as well as trends in the development of democratic values on various test results of various groups. Through the teaching of civics, the value analysis technique has been demonstrated to be successful in fostering democratic values among students.

Bemjanim B. M (2012) [6]

This paper examines the relationship between organizational atmosphere and the moral principles that Chennai's higher secondary students hold. Using a stratified random sampling technique, data from 1446 students in 20 schools were collected for this study. The inquiry being conducted now is a normative survey investigation. The variables considered in the study included moral principles, academic success, organizational climate, school climate, family environment, and demographic traits.

Mimar Türkkahraman (2103) [7]

In this study implications of social values in schools were discussed in global and national perspective. The objective of the study was:
1. to suggest a healthy way of teaching social values and elaborating the concepts of relationships between a student and social values.
2. explaining the complex nature of social values in international perspective and to build a healthy way to build a peaceful society and world.

Reyaz Ahmad Bhat (2018) [8]

This research elaborates on the necessity of value-based education in the society. The main objectives of this study are:
1. how can an individual modify a society to make it peaceful and functional.
2. to emphasize that the scientific and skill-based education is not the only need of the society, social values, spiritual values, moral values and religious values are equally important with the skill and scientific education.
3. Inculcating value-based education in students with the help of education in educational institutes.

Amardeep Singh (2011) [9]

By protecting children from harmful effects that could result from today's rampant materialism and aggressive rush for self-fulfillment, the instillation of values among students can play a crucial role. Colleges and other institutions have spent time and money over the past 20 years promoting character values and behaviors in their students through a variety of educational programs and initiatives.

Bhautik Barot et al. (2018) [10]

The primary goal of this review study was to determine why school values are declining. The researcher thinks that values have a close connection to how long we live, how they affect our goals in life, and how they influence how we act and move in different circumstances. From the very beginning of one's existence, education plays a very major and crucial part in forming the value system of the individual. Because values education is a part of life as well, the two are intertwined because values are reflected in educational practice.

The summary of the related work is briefly presented in Table I.

III. CORE ELEMENTS

Value based education can produce effective results if it is based on the five core elements. These elements are described below:

1) Sanskriti

Sanskriti refers to the social behavior, institutions, and norms present in a society. It also includes the knowledge, beliefs, and abilities of the people who are a part of the same. Societies with a rich Sanskriti inculcates moral values in people's attitudes as well as their daily lives and social interactions.

Indian Sanskriti, which belongs to the older generations of the community, should be passed to the next generation. It acts as a mirror which shows what our society was and what it is today. It will encourage the younger generations to apply the teachings of our rich culture to create the value rich future.

2) Sewa

Sewa refers to selfless service that is rendered without any hope of reward or recognition. Such services are rendered for the betterment of the society and its people. Therefore, Sewa or selfless service is a very important trait which should be inculcated in students to ensure advancement of society.

Students are the future of our country. They will be responsible for the development of our nation in the near future. These pupils should therefore be able to interact with people from all walk of life, empathize with their difficulties, and strive towards improving society on a social level. Sewa helps to inculcate these traits among students and nurturing them into individuals who can create a positive impact on society.

TABLE I
SUMMARY OF RELATED WORK

Year	Author	Critique	Ref
2007	Kujur, D.	The purpose of the study was to ascertain the impact of the students in class 8 as well as how they reacted to the technique of values clarification.	[1]
2005	Thakkar, B.	This case study examines the values and moral concepts embodied in a textbook for class IX as well as the values that students and teachers exhibit.	[2]
2004	Singh, K. J. P.	In order to determine whether teachers can tie their values to their work, this study looked at the attitudes and values that they have toward teaching.	[3]
2003	Peter, G.	Students' perspectives on democracy, patriotism, and secularism in the present and the future are captured in the study.	[4]
1998	Joshi, J.	The aim of the study to analyse the effectiveness in by developing democratic value in students by teaching civics.	[5]
2012	Benjamin, B. M.	The study was conducted to investigate the impact of organisational atmosphere in moral values. This a survey like study data were collected from 20 schools around Chennai.	[6]
2014	Mimar Tukkahraman	This study refers to the perspective of implication of social values in schools in international level, and a healthy and profaned way has been proposed to do so.	[7]
2018	Reyaz Ahmad Bhat	Need of value-based education in this society is discussed by the author, it is also been discussed that how can an individual is able to modify the society for making it better.	[8]
2011	Amardeep Singh	Values can protect our younger generation from taking wrong steps, it is the fundamental foundation of a man kind and should be regularly implemented in daily life.	[9]
2018	Bhautik Barot *et al.*	A review study to understand why the level of value education is dropping down in schools. How they affect the goal and dream of the coming generation and what could be done to revive that.	[10]

3) Naitik Moolya

Naitik Moolya are the rules that help a person distinguish between good and wrong. By instilling Naitik Moolya, we can foster characteristics like perseverance, integrity, fairness, kindness, politeness, and compassion in students. These characteristics can help to produce strong and kind leaders who can make the right decisions and lead the nation towards success and prosperity.

4) Vishleshan

Vishleshan is the act of analysing something in order to understand it or discover what it is made of. Practicing vishleshan helps to develop problem solving abilities, and higher order thinking skills such critical thinking and creativity in students.

Solving existing problems of the locality, community or the nation can be good way to inculcate the practice of Vishleshan in students. It can also help to produce out of the box solutions to existing problems or help to bring out new perspectives of looking at existing problems.

5. Shistachaar

Shistachaar refers to the manners and etiquettes possessed by a person. An individual with good manners respects the emotions and wishes of those who reside nearby. They treat everyone with respect and possess the qualities of modesty, humility, kindness, and courtesy.

It is said that manners are what makes a person perfect. They are is also an important lesson of every culture all over the world. But, now a days, the value of Shistachaar is diminishing among youngsters. Therefore, this must be instilled in students as this can teach them to empathize with others and treat everyone with love and respect.

Overall, these five core elements are an integral part of value-based education which can produce a "Complete Man" who can contribute positively towards the betterment of the community and, in turn, in the development of a fruitful nation.

IV. METHODOLOGY

This section proposes some practical activities to inculcate these core elements described in section III into value-based education**.**

1. Sanskriti

Sanskriti cannot be coerced into learning; rather, the intention should be to inspire the students. Sanskriti is a significant component of Indian culture in all regions of India. A brief introduction to Indian culture and moral education can be incorporated into the curriculum for every course. The depth of the course should increase with the level of education.

In addition to the theory, real-world examples should be included to motivate students and spark their interest in the subject matter. Students can learn about the Vedic Upanyas, Folk Tales, moral dilemmas, and local culture through theatrical performances. In India, the Ramayana and Mahabharata are performed on stages, but examples of the knowledge we learn from those sacred texts in modern society are also possible.

2. Sewa

Participating in sewa fosters socialization and helps students to empathize with the problems faced by people around them. It also gives an inward sense of fulfilment from contributing to society.

Participating in agricultural or tree-planting projects, as well as cleaning up the neighborhood and college campus, can increase awareness of nature, inspire new ideas for its preservation, and foster a sense of its importance in protecting society from a range of issues.

3. Naitik Moolya

An individual is defined by their moral values and belief systems. Understanding the issues that people in society face is necessary for developing them.

Participating in social service activities can help to increase the knowledge of social problems and develop respect for people who deal with these issues on a daily basis and still lead happy lives. Examples of such activities include campaigns for medical support, literacy

awareness, the importance of values and cultures, and environmental safety.

Special extra-curricular sessions can be organized to discuss social issues and issues faced by students at the schools and colleges. These sessions can enhance the students' ability to see the big picture and help to solve problems efficiently.

4. Vishleshan

The act of making the right choices in life to increase the likelihood of success is facilitated by understanding what is wrong and what is right. This ability can be gained only through introspection.

It has been said that before examining what is flawed in others, we must first examine our own selves. Co-curricular and self-government activities offer guidance, clarify in the decision-making process, and make it clear what adjustments one can make to themselves.

5. Shistachaar

Shistachaar is something that the public sees about you. Swami Vivekananda, one of our nation's most powerful figures, demonstrates the might of Shistachaar.

Organizing special talks and sessions about the life and teachings of Gurus, Vedic literature, and personalities like Swami Vivekananda and Mahatma Gandhi can inspire students to apply their teachings into in their everyday lives.

Table II presents a brief summary of practical activities to be incorporated into the curriculum to deeply inculcate the mentioned core elements into the students.

TABLE II
CORE ELEMENTS AND PRACTICAL ACTIVITIES

Core Elements	Practical Activities
1. Sanskriti	1. Introduction of courses on moral education and Indian culture into the course curriculum. 2. Stage plays on folk tales, moral issues, local culture, etc.
2. Sewa	1. Social service activities under proper supervision. 2. Tree plantation and agricultural activities. 3. Cleaning the locality and college campus.
3. Naitik Moolya	1. Organizing Campaigns in rural areas for literacy, values, culture and environment awareness.
4. Vishleshan	1. Co-curricular and self-government activities. 2. Modelling experiences in themes like Gender equality, caring for animals. 3. Activities related to solving environmental problems such as pollution and global warming problems etc.
5. Shishtaachaar	1. By demonstrating vedic literature in the form of play or video. 2. Sharing stories of gurus like Swami Vivekananda, to make them understand the power of shistaachaar.

V. CONCLUSION

Humans are of single species “Homosapien”, still we have made divisions among ourselves in terms of religions, caste and even by territories. People claim that Homosapien’s are the only intelligent species in the known universe. These days this intelligence is channelized for destructive acts.

Educational institutions, teachers and parents are responsible for inculcating values among the present generations and to shape them as responsible citizens. This research highlights the five core elements - Sanskriti, Sewa, Naitik Moolya, Vishleshan and Shishtaachaar which are an essential part of value-based education. The study also describes various practical activities for germinating the values as a seed in students.

It has been observed throughout the study that the subject of inculcating values in students is very important and needs to be further investigated. Insofar as developing a civilized, educated, intellectual, and well-balanced society is concerned. There are various recommended tactics that can help teach values in students. It has been recognized and agreed upon that self-realization is the most effective technique to learn the true importance of life.
